

## **MISSION STATEMENT**

To design and build customised presses to meet very specific application requirements in terms of innovative technology, precision engineering, high quality printing and production performance.

To be aware of market trends and packaging/labelling industry standards, both commercial and mandatory. Also where appropriate, to work in partnership with OEM suppliers and manufactures of consumables such as inks and substrates, to develop press technology to meet changing needs.

To recognise our customers' needs and as such, provide application advice, technical support and training in order that they can maximise their profits through efficient utilisation of their KPG presses.

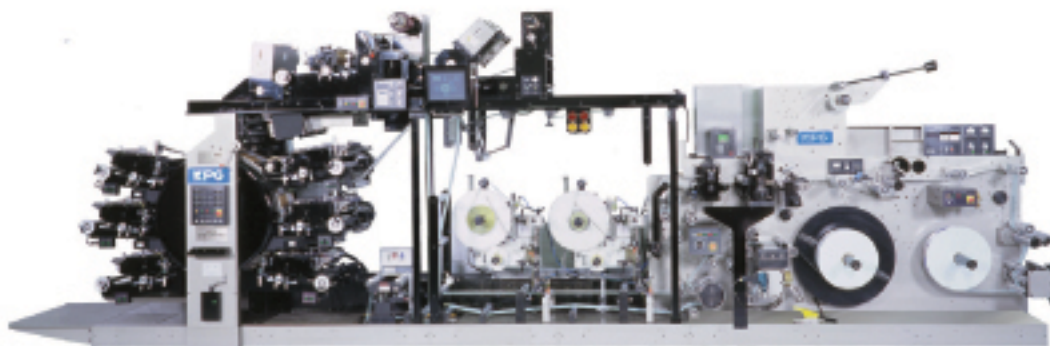

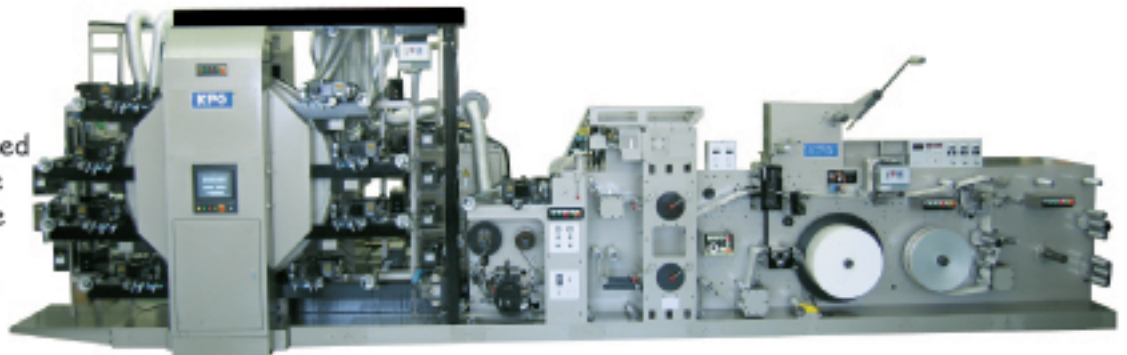

### **Euroflex 270 dual-pass casing press**

For 360° printing of polyamide food casings. Dual-pass technology, enables the web to be printed on both sides in 6 colours. Uses specially formulated cationic inks. Non-stop production. Speeds up to 100m/min.

### **Euroflex 270 tube and label press**

8-colours on an 1800mm temperature controlled central impression. Designed for printing ABL/PBL tube laminates. Includes in-line slitting so that printed rolls are ready for use on tube forming equipment.

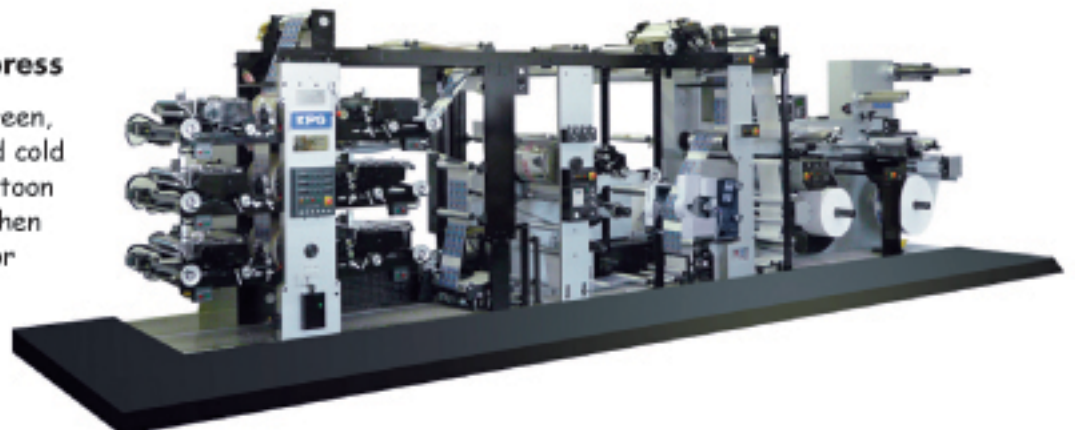

### **Euro 400 super press**

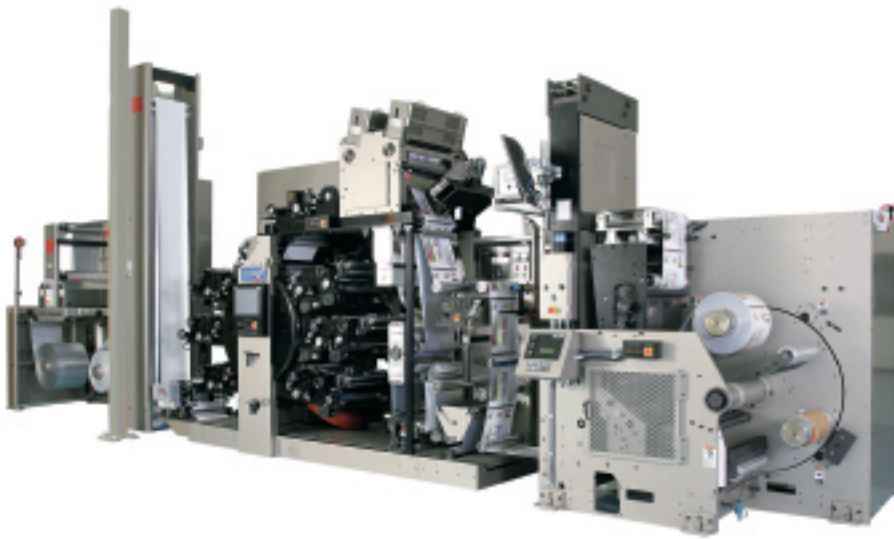

7-colours including cold foiling and in-line simultaneous application of RFID products onto the printed web.

### **Euro 400 combination press**

8-colours including rotary screen, letterpress, flexo varnish and cold foiling. Also fitted with a festoon to take up the backing web when printing on the reverse side or adhesive. Versatile print configuration for maximum production flexibility.

All presses illustrated are available with either a 270mm or 400mm web width.

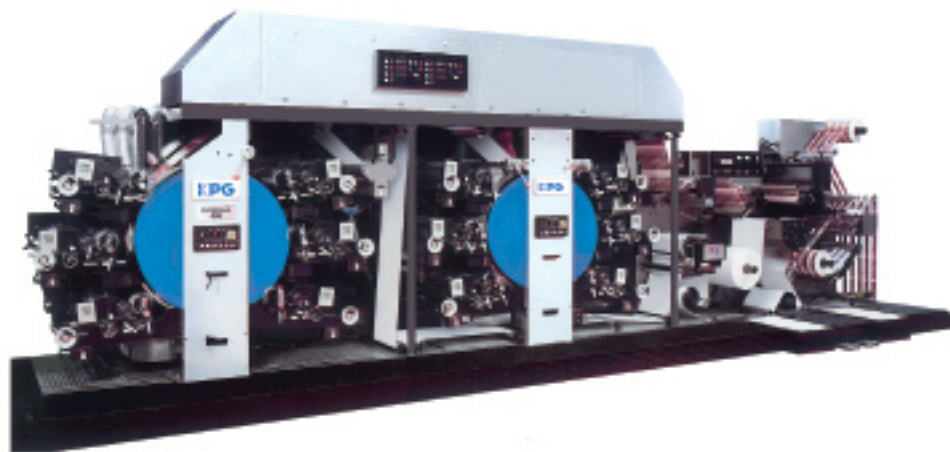

### **Euro 400 tube press**

6-colours for printing ABL/PBL tube laminates. Fully automatic splicer and turret rewind for non-stop production. Operating speeds up to 100m/min.

### **Euro Super booklet label press**

12-colour booklet label press, also suitable for producing a variety of multi-web/multi-substrate marketing products. Versatile web paths and a variety of converting options.

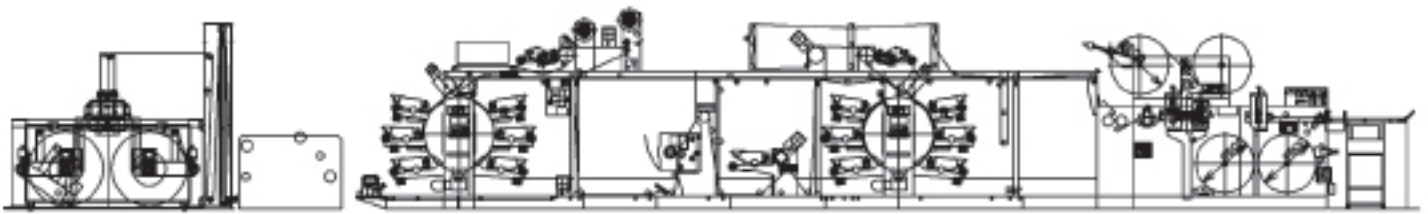

### **Euroflex 400 film and sleeve press**

Up to 16 colours on twin temperature controlled 1800mm drums, plus two varnish units for printing packaging and shrink sleeve films. Ideal for novelty wrap-around label production.

KPG specialist presses are designed for specific packaging and labelling applications - applications requiring very precise printing and converting technology, frequently required for difficult to handle substrates and products.

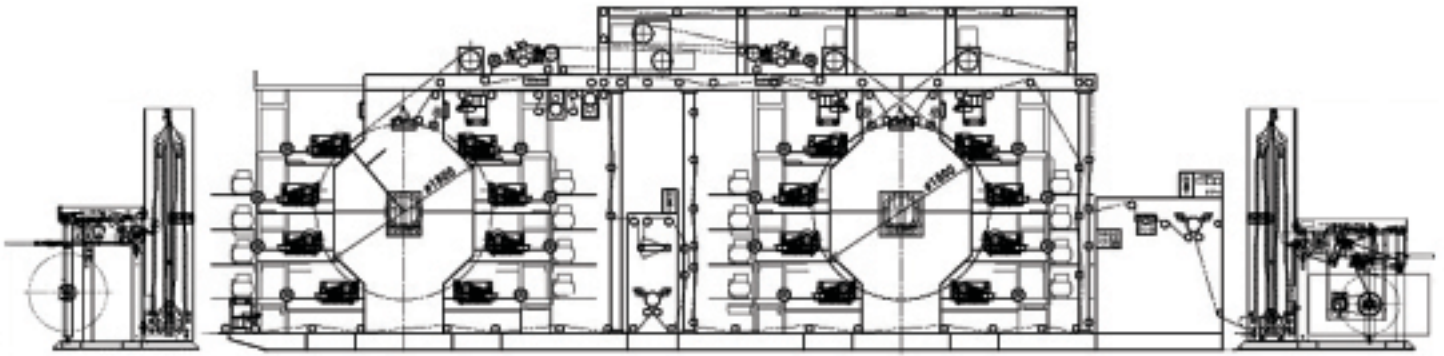

Irrespective of the product application, the design philosophy for KPG presses, is that all processes should be in-line to achieve maximum production efficiency. Whether the application requires; 360° printing of polyamide food casings, printing and encapsulating phone cards, producing combined booklet and bottle hanger labels, novelty 'window' wrap-around film labels or printing and slitting tube laminates, KPG can design a press to meet these and other very specific requirements.

ToyoKoki, have over 30 year's experience of building customised presses. Offering a choice of web widths, print processes and converting options, the company is widely recognised for high quality engineering and innovative technology to provide new packaging solutions. Toyo/KPG presses are installed throughout the world.

### Euro 400 phone card press

14-colours including rotary screen and flexo varnish.  
In-line purpose designed encapsulating system  
for printed board and pvc telephone cards.

### Euroflex 250 casing press

Up to 16-colours on twin temperature controlled 1800mm drums,  
plus two flexo varnish units. 360° printing of polyamide casings.  
Also suitable for printing food pouches on both sides.

## AFTER-SALES SUPPORT

KPG provides worldwide technical after-sales support with engineers based in Europe, Japan and the USA. Additionally, an extensive distributor network provides customers with local technical service.

### Exchange Service

To minimise press down time, KPG offers an exchange service on the following:

- Central impression drums
- Stack impression drums
- Print units
- Flatbed
